

Printing Operation Management System

Production optimization with MES closes the gap between ERP and machines.

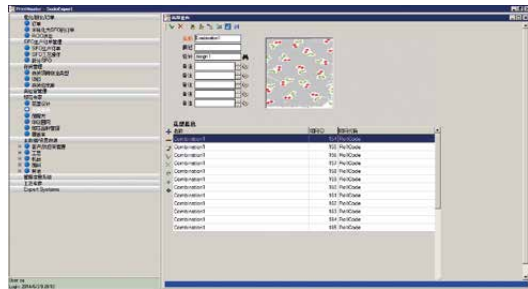

PrintMaster is a MES platform designed to manage modern textile printing factories or companies having a printing department. Printing operation management comprises:

- Orders Management and Execution
- Samples/ Quotations Management
- Quality Management
- Inventory Management & Costing

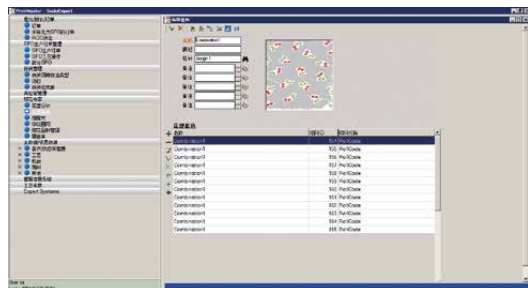

Printing Expert System:

- Processing expert
- New Products Development Expert
- Designs and Combinations
- Recipes Management
- Rest paste management

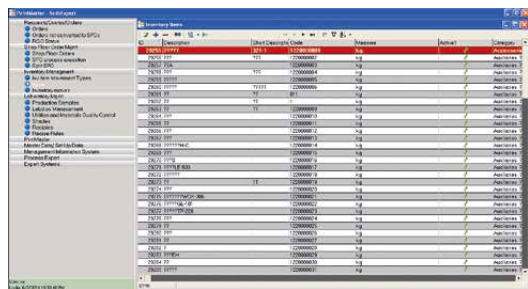

Improve your workflow

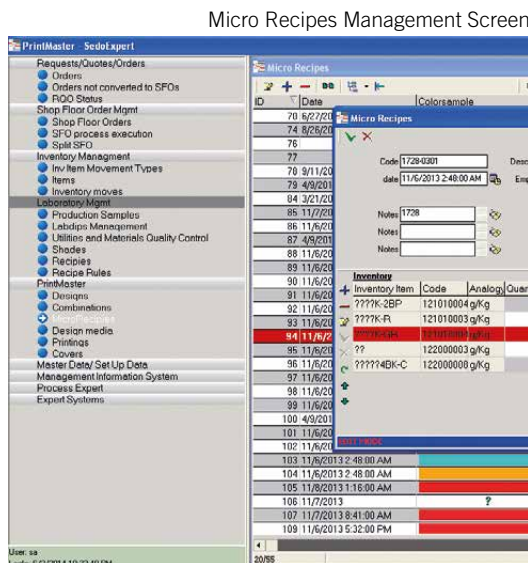

Printing Design Master Screen

Printing Combination Master Screen

Rest Paste Management Master

Micro Recipes Management Screen

Highlights:

The Designs and Combinations Manager allows the user to perform tasks like

- Management of Design Specific Data
- Manage Combinations, recipes and settings to print correctly
- Manage screens, rolls etc.
- Detailed costing, designs libraries for customer purposes etc.

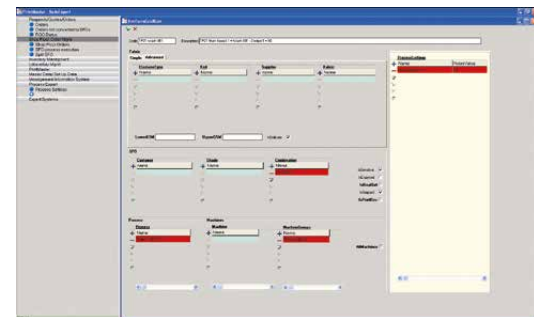

The screen depicts a print design with its attributes (customer, class, relevant dates, required print media, rolls etc.) and its color combinations with their attributes (position of rolls, color recipes, machine settings etc.)

To maintain the overview of submitted samples and price quotations, PrintMaster keeps a samples inventory per combination (upper picture half) and records any quotation or sample given to a customer (incl. price –lower picture- and process settings for that sample).

Rest paste management functionality ensures that rest pastes are optimal used by subsequent orders and hence cost is reduced substantially.

Benefits:

Together with SedoExpert and other MES systems like SedoMaster, ColorMaster and EnergyMaster, PrintMaster can be an essential component to run a finishing factory or can be used as a stand-alone system.
